

A The phenotype is strong, and it is not smoking
KEAP1 predictable at 0.910 from methylation alone

B It spares promoter CpG islands and concentrates in open sea (odds ratios shown)

C The pre-declared NRF2 pathway is enriched
p = 0.003 against 1,000 size-matched sets (33 genes)

D Smoking explains 12.4% of it, only 1.31× chance
R08 called this confound unresolvable
